Tip Calculator

Instructions

If the bill was $150.00, split between 5 people, with 12% tip.

Each person should pay (150.00 / 5) * 1.12 = 33.6

Format the result to 2 decimal places = 33.60

Thus everyone's share of the total bill is $30.00 plus a $3.60 tip.

The program will start:

```
Welcome to the tip calculator!
```

Example Input

```
What was the total bill? $124.56
How much tip would you like to give? 10, 12, or 15? 12
How many people to split the bill? 7
```

Example Output

```
Each person should pay: $19.93
```

Hint

You might have to do some Googling.

How to round a number to 2 decimal places in Python?
